

STEM PROJECTS FOR AUGUST

WEEK 1

Sunglasses block some of the light but not all of it - You can still see. Have you ever noticed that light could shine through certain objects but not others? Let's experiment with a flashlight on objects to see how the light shines through.

WEEK 2

If you poke a hole in your juice box it will leak. Our class will do an experiment to see if we can poke a hole in a bag filled with water without it leaking.

WEEK 3

We love to draw and paint with colors. What would happen if we mixed colors with paint with? Could we make new color?

WEEK 4

We love our names. Our teacher will challenge us to construct our names using items in the classroom.
